BBQScreen is designed to monitor & view the screen of any android device. And we don't insist on it to be on the cloud, it can be anywhere as long as the display captured. Benefit

1. Low power consumption.
2. Free & Fast.
3. View your mobile phone screen on your computer, setup your connection and press the single button to get the pic screenshot of your android device.
4. Support Remote Control
5. Real time monitor the screen of your device.
6. Save the pic screenshot for later use.
7. Detailed information provided as the pic of your mobile phone screen.
8. Support Windows & Mac OS.
9. Easy to install and operate.
10. No root permission is needed to install the app. You can set up the connection and start monitor your device easily. Save the pic screenshot of the screen. Detail information of the pic is provided as the following.

===== #BBQScreen is a tool designed to help you view your Android smartphone's screen on the computer at full speed. Generally speaking, while there are numerous Android-to-PC pairing solutions out there, a common issue is that you are unable to check out the screen in real time and some even have a high framerate. It is worth mentioning that for the tool to work, you need to grab the mobile app from the GooglePlay store and install it. Once the apps are installed on the mobile and PC, you can easily set up the remote connection between the two devices. Moreover, the connection can be made to work via various options, Bluetooth tethering, USB tethering and WiFi, the latter two providing the best experience. Some users have pointed out that you may need to set a forwarding port for the applications to work properly. According to the developer, the forwarding port should be 8976 UDP and you need to make sure that the devices are in the same network. As far as the compatibility goes, the tool should be working with all devices, as the app relies on the system's capability to do screenshots. Then again, the testing for the tool were performed on Nexus 4, S3, Note II and TF700T. BBQScreen Description: BBQScreen is designed to monitor & view the screen of any android device. As far as the compatibility goes, the tool should be working with all devices, as the app relies on the system's capability to do screenshots. Then again, the testing for the tool were performed on Nexus 4, S3, Note II and TF700T. 9. SDK Manager Android Studio is the most popular IDE for Android applications. It allows you to develop applications for Android phones and tablets. The main advantage of using this tool is that you will be able to make use of plugins, that are not available in other IDEs. Moreover, it is also possible to use the tool to directly create Android applications. There are some other really handy features, namely the debugger and the graphical layout. So, what are you waiting for? Get your hands on Android Studio and start creating awesome Android apps. Make sure that you install Android Studio together with the Android SDK. This will make working with the tools easier and faster. The Android SDK Manager allows you to install or remove the different SDKs available for Android. The tool will also help you install the SDKs in case they are not found on the update process. The tool is located in the Developer tools category. Just click on the SDK Manager tool, then click on SDK Tools and finally click on 'Install Packages'. When Android Studio is installed, click on the Tools menu and then select SDK Manager. 10. Root Explorer Root Explorer is a tool, which can help you clear different caches, the one of the most important 09e8f5149f

- The most convenient device for testing Android screens on the PC, without any cables.
- Supports two methods to connect to PC: over network using Wi-Fi or 3G/4G, and USB connectivity.
- Automatically displays the screenshots in a list view, showing basic information, such as the software version, date and time, and the resolution.
- Displays detailed information of the Android version installed on the device (Google Play, AOSP and custom ROM).
- Full support for Android Lollipop (5.0) and Kitkat (4.4).
- Background support: the app has no effect on CPU performance.
- Supports native resolution up to 2730×1916.
- Free of charge for developers and for users who like BBQScreen. For the latest release visit: [Key Features](#):
- Comes with the built-in network protocol, UDP, which is a fast and highly reliable transport protocol.
- Supports the Android NDK, the development environment for native applications.
- Allowing you to examine the device's screen in real time and to display your screen as a live preview.
- Allows you to start or stop the remote connection at any time.
- Allows you to set up the connection using multiple methods, including the built-in Bluetooth® option, USB and Wi-Fi.
- Automatically opens the application on the mobile, saving you the hassle of installing and starting it first.
- Fully supports Android Lollipop (5.0), Kitkat (4.4) and Android 4.3.
- Supports all Android phones and tablets on the market.
- Uses native controls and no virtual keys.

Tag: Services This month's column is by a guru in the wholesale air shipping industry, and because we now live in the world of social media, we hope you will follow him on Twitter or Facebook so that you can get his take on things that matter to you. It's a very busy time of year for Harry Lupton. "I'm pretty busy these days," says Harry, who heads Amazu Direct and has been in the air freight industry for more than 25 years. "That's the good thing," he says, "I'm not doing anything I can't take a break from." But this busy period is different from

#### What's New In BBQScreen?

- Remote control for your Android device
- Full-screen view of the display
- Tilt and rotate your phone
- Pick up where you left off
