This SQL Server 2005 utility will allow you to submit Transact-SQL batches to SQL Server 7.0, SQL Server 2000, and SQL Server 2005 instances. It is a replacement for ISQL and OSQL, but can coexist with installations that have ISQL or OSQL installed. If you have a Windows 2000 system with SQL Server 2000 installed, you can use the SQLCMD utility to submit T-SQL batches and read results. SQLCMD will not allow you to write Transact-SQL commands directly to SQL Server, but it can be used to execute stored procedures and T-SQL scripts. The utility includes the ability to connect to remote server instances, send batches, and read rowset results.
