## Audio Broadcast Server Crack

### Audio Broadcast Server Crack Patch With Serial Key [Updated-2022]

❓ Extend the functionality of Windows Media Player for streaming audio files  
❓ Listen to music or voice on the network  
❓ Fast and effective to broadcast audio files on the network  
❓ Support mp3, wav and wma format  
❓ Automatic stop and restart when you close the software  
❓ Share audio files with everyone else  
❓ No virus, no software update needed

The Audio Broadcast Server Cracked Version can broadcast a single audio file or playlist on your LAN network. The broadcast source can be as a Windows Media Player connection, a sound card input (Audio Input device) or any other audio source (like a TV Tuner card). You can set the audio profile and the broadcast frequency in order to fit your needs. The audio streaming can be either by Ethernet or by Internet. You can create and save up to 50 audio profiles for future use. With a password, you can easily control the broadcast parameters. The Audio Server is a most

---

effective system for the following applications:

- Broadcast music and voice to employees on the network
- Broadcast all music or voice to a group of people
- To send voice message or a countdown to thousands of people

You can use Audio Server to:

- Broadcast music and voice files to people on your network
- Broadcast voice messages or voice files to people who are far away from your office
- Broadcast music and voice file to people over the Internet

Here are a few tips to help you with using Audio Server:

- When the Audio Server is running, don't close or open any other program. All the listening will be affected.
- If you want to make sure no one listens to your music or voice while the server is running, try to set a password before starting the server.
- If you run the Audio Server with a password, the server will be automatically stopped if no one listens for 5 minutes. After 5 minutes the server will be automatically restarted when someone listens to the audio.

Some other features of Audio Server include:

- The best quality video and audio can be played on the Internet.
- Support wav, mp3, wma, m4a formats.
- Support Audio for 64 bit platform.
- Support Internet stream.
- Automatically stop and restart the server when the software is closed. ◆

#### **Audio Broadcast Server**

EZ Audio Server Editor: You can edit the settings of the server by downloading the "EZ Audio Server Editor" program. The "EZ Audio Server Editor" can help you change the profile settings and set the favorite songs. AZTEC MediaCenter is an easy to use Windows application for streaming and playing audio and video files. It is open source and provides all the functionality of other mediaplayers. It supports the WMA (WMA2, WMA3, WMA DRM), MP3, AAC, AC3, MP2, ALAC and FLAC sound formats. AZTEC MediaCenter allows you to define a playlist with several sources to play. The sources can be selected through a selector on the player window or in the player's library. AZTEC MediaCenter also

---

supports the streaming of video and audio files from your hard drive. Streaming allows you to play audio/video files without loading them into the player. AZTEC MediaCenter supports the streaming of both wav- and mp3-files to a streaming player. You can also select the streaming rate of your files. AZTEC MediaCenter can handle many files at once. It can select and play them simultaneously. The player window of AZTEC MediaCenter offers you the chance to rate the current file or the selected file. When the player window is closed, the recorded rating is

#### **What's New in the?**

❓ EZ Audio Server is a powerful audio streaming software which can accept a selected file from your hard drive and broadcast the audio files to listeners connected to your network. ❓ By default, the audio files will be broadcasted to all listeners on your local network. You can control the level of volume by selecting one of 50 audio stream profiles. ❓ The Source file is copied to the broadcast folder. ❓ This software is a stand-alone software that does not require any additional software to be installed in the listener's computers. ❓ The user can set the broadcast folder to the computer hard drive. It can be set to any folder you want. ❓ You can use any audio file (mp3 or wav format) as the source for the broadcast. ❓ When the audio broadcast is finished, a log file can be found in the broadcasting folder. ❓ While the server is working in Stand-alone mode, if the user closes the application, the audio streaming will be paused. [Main Features] 1. EZ Audio Server can accept any audio file as the source for the broadcast. 2. The broadcast audio files will be repeated to all listeners. 3. You can select any audio stream profile (20 levels) for the broadcast. 4.

---

Audio files broadcasted on the network are received by listener's Windows Media Player and played in real time. 5. User can connect to the audio broadcast server in either LAN or Internet. 6. EZ Audio Server can also accept a single audio file from the listener's Windows Media Player as the broadcast audio source. 7. EZ Audio Server will auto stop within 5 minutes in this trial version. 8. If you are satisfied with this software, please buy the license. [About] Software Author: JTCreative.com [Licensing] EZ Audio Server is free software released under the GNU General Public License. EZ Audio Server source code and binary distribution is free for non-commercial use only. You may not copy, modify, or distribute this software. You may make non-commercial binary programs, which run on non-commercial computers, free software programs, and distribute these programs to other computer users. [Who uses EZ Audio Server] By default, it is used by computer users who have music, voice, or other audio programs that they want to broadcast to the world. [Programming languages] C [Operating system] Windows Vista, XP, 2000, 2003, ME, NT4, NT5, [Suggested using a program to be used with EZ Audio Server] Use the Windows Media Player as the broadcast client.
